Note 1: ASME B16.9 Pressure-temperature ratings are in accordance with ASME B16.9 para. 2.1 which states:

2.1 Basis of Ratings

The allowable pressure ratings for fittings designed in accordance with this Standard may be calculated as for straight seamless pipe of equivalent material (as shown by comparison of composition and mechanical properties in the respective material specifications) in accordance with the rules established in the applicable sections of ASME B31, Code for Pressure Piping. For the calculation, applicable data for the pipe size, wall thickness, and material that are equivalent to that of the fitting shall be used. Pipe size, wall thickness (or schedule number), and material identity on the fittings are in lieu of pressure rating markings.

Note 2: MSS SP-43 Pressure-temperature ratings are in accordance with ASME MSS SP-43 para. 3.1 which states:

3.1 Fittings covered by this Standard Practice are primarily intended for corrosion resistant applications; however, they shall have a pressure rating equal to 30% of the allowable pressure rating for comparable straight seamless pipe of the same wall and grade of material as marked on the fittings, whose ratings are determined by the applicable ASME B31 Code for Pressure Piping.

Note 3: Products that are to operate at low temperatures shall conform to the rules of the applicable codes under which they are used.

Note 4: See ISO 9001:2015 Certificate attached for list of manufacturing locations covered under this CRN.
